Design Document

Instructions

The following pages are a design review template. Please follow these directions for filling out this template carefully. Items in italics are information that you are to fill in, beginning with the project name, date, and version number. Use the same version numbering system that we used with the requirements document.

The design should include both system and program design. Design concepts must be clearly separated from requirements and the implementation.

Template

Your Project Name
Date
Version *major/minor*

1. Summary

Here you should give a summary of your design review. This section, which should be relatively short, focuses on the recommendations you consider to be the most important.

Main design part

-High level design using DFDs, flow chart, UML diag or other

-low level design using algos

2. Questions

At the end of the design document template, there were a number of questions that you should use to guide your review. Please organize your comments as answers to these questions. Your answers may be of any length, but should be justified by reference to specific parts of the design document (and specification, if appropriate).

3. Comments

Any other comments?
